

IC Data Model — Entity Relationship Diagram

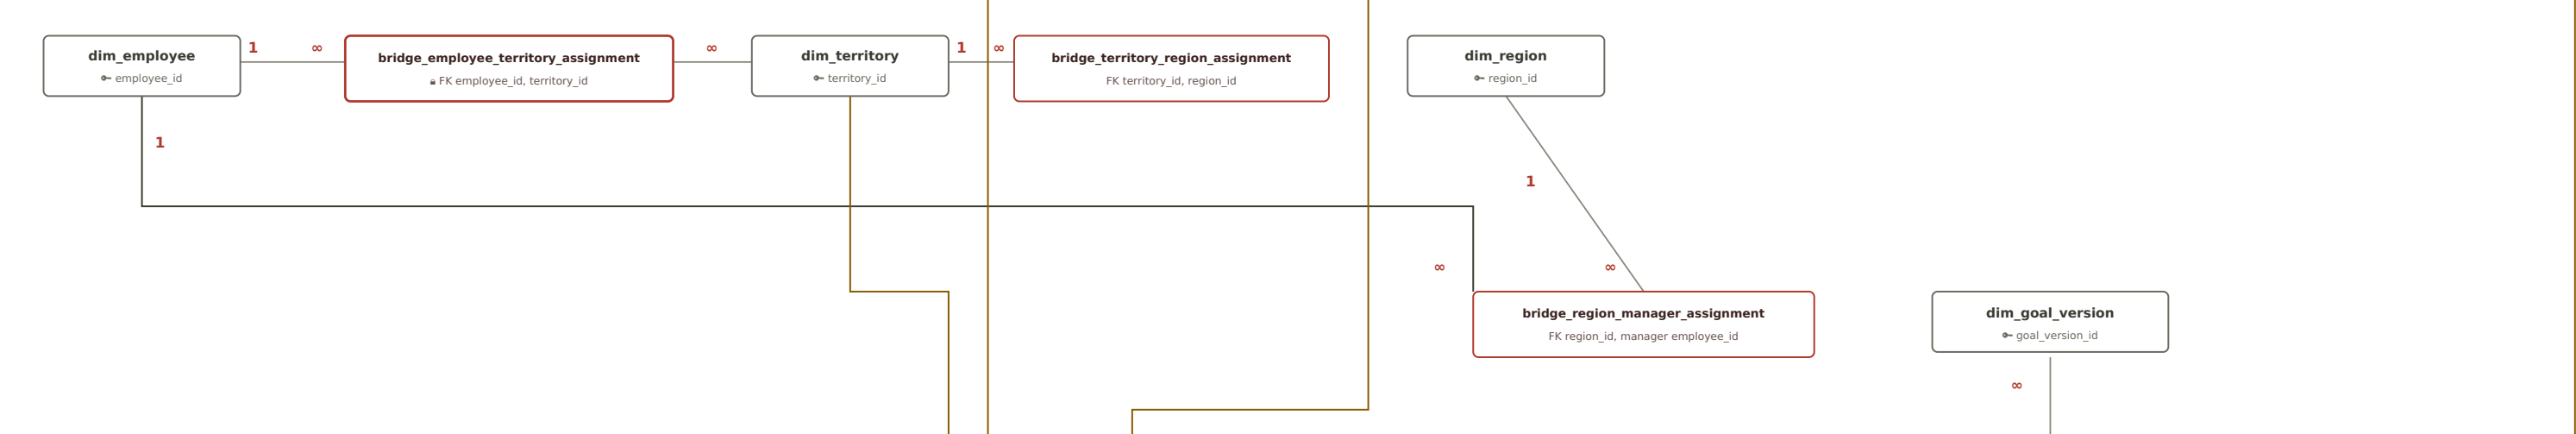

Built directly from the 24 relationships provided. Standard ER cardinality notation: 1 = one side, ∞ = many side. Organized into two groups — Non-Fact Tables (configuration, reference, dimensions, bridges) and Fact Tables — rather than many small sub-clusters.

RLS-secured entity (Quarterly IC)No RLS (Monthly Contest)Shared dimension= Primary Key · FK = Foreign Key

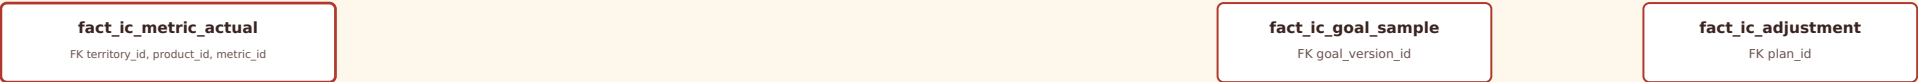

NON-FACT TABLES — Configuration, Reference, Dimensions & Bridges

Employee, Territory & Organization Hierarchy

FACT TABLES

Only 3 fact tables exist in the source model — grouped in their own band so it's immediately clear how few there are relative to the 21 non-fact (config/dimension/bridge) tables above. All three read exclusively from the non-fact layer above — no fact table has an outgoing relationship into another fact table. Each connector below now runs through its own dedicated lane, dropping straight down with a single jog, so no line backtracks into a box or overlaps another relationship.

From Table	From Field	To Table	To Field	Relationship	Purpose
dim_employee	employee_id	bridge_employee_territory_assignment	employee_id	1-to-many	Employee assigned to territory by effective dates
dim_employee	employee_id	bridge_region_manager_assignment	employee_id	1-to-many	Manager assigned to region
fact_ic_goal_sample	goal_version_id	dim_goal_version	goal_version_id	many-to-1	Goal row tied to approved goal version
dim_metric	metric_id	bridge_plan_product_metric	metric_id	1-to-many	Metric included by plan/product
dim_metric	metric_id	fact_ic_metric_actual	metric_id	1-to-many	Metric actuals
ref_plan_component	payout_curve_id	ref_payout_curve	payout_curve_id	many-to-1	Component uses a payout curve
ref_payout_curve	payout_curve_id	ref_payout_curve_tier	payout_curve_id	1-to-many	Curve has many tiers
ref_ic_plan	plan_id	ref_plan_component	plan_id	1-to-many	A plan contains many components
ref_ic_plan	plan_id	ref_plan_role_incentive	plan_id	1-to-many	A plan has target incentives by role
ref_ic_plan	plan_id	bridge_plan_product_metric	plan_id	1-to-many	Plan selects products and metrics
fact_ic_adjustment_sample	plan_id	ref_ic_plan	plan_id	many-to-1	Adjustment tied to plan
ref_mbo_objective	plan_id	ref_ic_plan	plan_id	many-to-1	MBO objective belongs to plan
ref_contest	plan_id	ref_ic_plan	plan_id	many-to-1	Contest represented as plan
ref_recalculation_policy	plan_id	ref_ic_plan	plan_id	1-to-1 or 1-to-many	Plan-specific recalculation rules
ref_lock_policy	plan_id	bridge_plan_product_metric	plan_id	1-to-1 or 1-to-many	Plan-specific lock rules
